[Clear The F.O.G. With Drain Cleaning In Thornton CO](#)

[no comment](#)

Fats, oils, and grease, otherwise known as F.O.G., are the number one cause of drain and sewage system clogs in America. Kitchens and bathrooms are the main areas of our homes and businesses where F.O.G. occurs due mainly to preparing foods that are high in fats and oils such as meats or grease used in making French fries, deep fried fish, or chicken products. These fats, oils, and grease spill into the sink or get flushed down the toilet. But things such as some shampoos made from organic materials and soaps can cause buildup of oil, and even fat, that wash down the drain while we bathe or shower. In order to get the F.O.G. out you need [drain cleaning in Thornton CO](#).

So, how does F.O.G. mess up our plumbing? Basically, F.O.G. is like glue that over time builds up, like plaque in arteries, restricting the flow of water promoting clogs and backups. This is a very common problem found in many commercial kitchens because of the volume of food preparation that is handled. Left long enough, F.O.G. can actually become as hard as a rock leading to a complete blockage of pipes and sewer systems that is costly to repair since in many cases the damaged pipes must be ripped out and replaced with new pipes and drains.

When clogs happen, the most common form of **drain cleaning** in Thornton CO is to purchase chemical-based drain solvents that are caustic and work, like acid, to dissolve blockages. It's like adding hot or boiling water over an ice cube. These products are commercially available and used in both residential and commercial applications. The problem with this approach is that drain-cleaning products that are chemical-based don't always produce long lasting results. In fact, such products can, over time, actually cause damage to the plumbing system itself. It is a case of the cure almost being worse than the disease.

So, what's the best way to approach drain cleaning in Thornton CO?

Recent breakthroughs in natural cleaning solutions are just now becoming more commercially available as people are becoming more environmentally conscious. From concerns over the ozone layer to harsh chemicals that are finding their way into our rivers and streams and eventually our

drinking water supplies, people are looking for more natural ways to deal with common problems such as drain cleaning in Thornton CO.

Manufacturers are now making proven biological cleaning solutions that address concerns associated with common industrial, kitchen, and household drainage. Cleaners are made from natural products that create a preventative bio-shield that protects by coating the inner walls of pipes and sewer lines, and attack existing F.O.G. layers while helping to prevent future build up. Essentially, industrial strength cleaners made from naturally occurring ingredients actually consumes F.O.G. while leaving behind just water and carbon dioxide rather than harsh chemicals. This approach is much more eco-friendly and can actually save money in the long run.

There are several manufacturers that cater to restaurants and industrial food processing plants that will make F.O.G. management simpler, especially when used in conjunction with an electronic system that manages the amount of cleaning product that is dispensed. This process actually reduces, if not completely eliminates, the need for pumping grease from traps and so on.

Within no time you will notice that not only will drains run much better, there will be no unpleasant smell due to the buildup of fats, oils, and grease. When used correctly, industrial strength drain cleaners made from natural ingredients will have clogged drains running freely within a few days and create a much healthier environment to live in.
